complete environmental solutions

Petro Waste Busters
complete **environmental** solutions

**Inspiring
conservation
of ecology**

Corporate Profile

Petro Waste Busters, an ISO 14001 certified, is a privately owned, integrated, diversified and customer oriented waste management company, incorporated in 2000. We provide waste management services keeping in view the principles of sustainable environment.

Petro Waste Busters is a leading waste management company in Pakistan, delivering quality services through innovative systems and effective resource management, maintaining high ethical and professional standards, providing enhanced value to our customers and contributing to environment. Our experts assess streams and develop right recycling and disposal solutions. We are committed to provide a reliable and responsible hazardous waste management program because our services have a direct impact on the environment. Our services and infrastructure encompass the widest range and provide our customers with one source for solving their environmental, industrial and waste management issues.

Petro Waste Busters offers numerous efficient and ingenious services. Disposing waste in an environment friendly manner is crucial for a waste management company yet we provide quick response toward unforeseen trials.

Emergency Response

Oil Spill Response

Electronic Waste Disposal

Catalyst Metal Recovery

Waste Management Process

Collection

Numerous industries across Pakistan are generating massive tons of chemical and variety of environment destructive wastes. These waste products are collected from hazardous waste collection site, industry, mills and commercial zones.

Transportation

Petro Waste Busters has hired specialized personnel to look over the task of transportation. We have safe and trustworthy transferring facilities for the transportation of waste from industry to collection site and then from the storage house to disposal site.

Storage

Waste is then stored in company maintained warehouses. Different products need different storage conditions. We have a storage facility for all types of chemical, toxic and destructive industrial waste.

Treatment

Waste material is collected from various sites and brought to the treatment site for processing. Discarded waste passes from various processes, so it becomes fit for reuse or disposal.

Disposal

In order to preserve the environment and to provide measures for protection of public health, we have disposal sites with adequate industrial solid waste facilities. After certain procedures, if it is concluded that the waste at hand can not be reused as similar or distinctive product., it is disposed in such a way that it reduces its impact on the environment.

Chasing **5R** Approach!
